

CYRUS

★ KOUROSH-E BOZORG ★

Token of the Persian Legacy

Whitepaper

Version 1.5.0

*"I am Cyrus, king of the world, great king, mighty king...
I gathered all their peoples and restored them to their homelands.
I did not allow any to terrorize the land."*

— The Cyrus Cylinder, 539 BCE

FOR THE PARS COMMUNITY & DIASPORA

Honoring the Father of Human Rights

CYRUS unites the global Persian community—from Tehran to Los Angeles, London to Sydney—in celebration of our shared heritage and the timeless principles of freedom, tolerance, and human dignity proclaimed by Cyrus the Great 2,500 years ago.

Total Supply: 1,000,000,000 CYRUS
Bonding Curve: \$0.01 → \$1.00 (100X)
Community-First: 90% Public Sale

January 11, 2026

Abstract

CYRUS is the official token of the PARS community, honoring the extraordinary legacy of Cyrus the Great (Kourosh-e Bozorg, c. 600–530 BCE), founder of the Achaemenid Empire and author of humanity's first declaration of human rights. This token serves as a unifying symbol for the global Persian diaspora—an estimated 8 million people spread across continents who share a 2,500-year heritage of civilization, culture, and the revolutionary principles first proclaimed in the Cyrus Cylinder.

Built for the PARS community and the broader Iranian diaspora, CYRUS creates a decentralized platform for cultural preservation, educational initiatives, and humanitarian action. Through DAO governance, token holders direct treasury funds toward Persian cultural centers, language programs, heritage preservation, and support for those facing oppression—continuing the liberating mission that Cyrus began in ancient Babylon.

This whitepaper details the historical significance of Cyrus the Great, the tokenomics designed for sustainable community growth, and the governance structures that empower the PARS community to build a lasting legacy worthy of its founder.

To the Persian People Worldwide

Az Mā Beh Mā — From Us, For Us

To our brothers and sisters of Persian heritage, wherever you may be:

In Los Angeles and London, in Toronto and Tel Aviv, in Sydney and Stockholm, in Dubai and Berlin—millions of us carry the legacy of Persian civilization in our hearts. We are the children of Cyrus, heirs to an empire that stretched from Egypt to India, descendants of poets and scientists, mathematicians and philosophers.

Our ancestor Cyrus the Great showed the world a different way to build an empire—not through terror and subjugation, but through tolerance and respect for human dignity. When he conquered Babylon, he freed the enslaved. When he ruled diverse peoples, he honored their gods and customs. He wrote the first declaration of human rights on a clay cylinder that still inspires the United Nations today.

CYRUS token is our digital continuation of this legacy.

This is not merely a cryptocurrency—it is a symbol of Persian unity, a tool for community empowerment, and a means to preserve and promote our rich cultural heritage for generations to come. Through the CYRUS DAO, we will fund Persian language schools, cultural centers, historical preservation, and humanitarian initiatives that would make our great ancestor proud.

Zendeh bād Irān. Zendeh bād Kourosh.

Long live Iran. Long live Cyrus.

1 The Moment We Are In

*“Come, come, whoever you are,
Wanderer, worshiper, lover of leaving.
It doesn’t matter.
Ours is not a caravan of despair.”*

— Rumi (Jalal ad-Din Muhammad Balkhi)

1.1 Iran at the Crossroads

We stand at a historic inflection point. After more than four decades of theocratic rule, the people of Iran have risen. The **Woman, Life, Freedom** movement—sparked by the death of Mahsa Jina Amini in September 2022—revealed what the world had forgotten: the Persian spirit cannot be extinguished.

From the streets of Tehran to the mountains of Kurdistan, from Isfahan to Shiraz, Iranians have declared with their blood and their courage: “*We want our country back.*”

Zan, Zendegi, Azadi

Woman, Life, Freedom

This is not merely a slogan—it is the battle cry of a civilization reclaiming its soul.

It echoes the same principles Cyrus proclaimed 2,500 years ago:

Freedom. Dignity. The sanctity of human life.

1.2 The Diaspora's Sacred Duty

We, the 8 million Iranians living outside our homeland, carry a profound responsibility. We have what our brothers and sisters inside Iran do not:

- **Freedom of speech** — We can organize, advocate, and mobilize without fear
- **Financial resources** — The diaspora controls significant capital
- **Global networks** — We are embedded in the world's most powerful institutions
- **Technical expertise** — Iranian engineers and entrepreneurs lead in technology
- **Safety** — We can take risks our families inside cannot

With these advantages comes obligation. We cannot sit idle while our homeland burns. We cannot watch from comfortable distance as young Iranians sacrifice everything for freedom.

CYRUS is our answer. A decentralized treasury, governed by the diaspora, funding the liberation and rebuilding of Iran.

1.3 Why This Moment Matters

History teaches us that regimes do not fall on their own. They fall when:

1. The people lose fear and rise up — *Happening now*
2. The diaspora provides sustained support — *Our mission*
3. A credible alternative emerges — *The Pahlavi path*
4. International pressure mounts — *Growing daily*

The Islamic Republic is weaker than it has ever been. Sanctions bite. The economy crumbles. The people have lost faith. The Revolutionary Guard is stretched thin.

This is our window. This is our generation's calling.

2 The Pahlavi Continuity

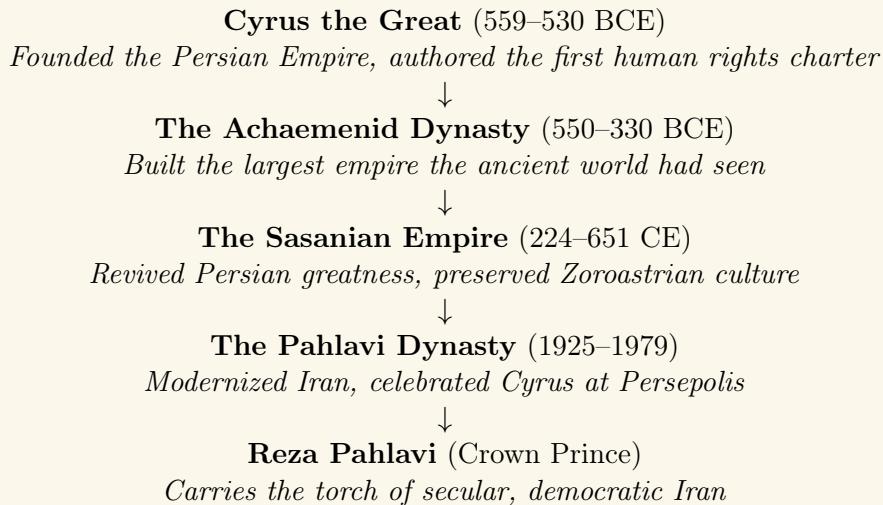

*"I wish I could show you,
when you are lonely or in darkness,
the astonishing light of your own being."*

— Hafez (Khwaja Shams-ud-Din Muhammad Hafez-e Shirazi)

2.1 From Cyrus to Reza: 2,500 Years of Persian Leadership

The name Cyrus—Kourosh—has echoed through Persian history for 25 centuries. It is no accident that Iran's crown prince bears this legacy.

The Line of Persian Greatness:

2.2 The 2,500 Year Celebration

In 1971, Mohammad Reza Shah Pahlavi hosted the world at Persepolis for the 2,500th anniversary of the Persian Empire. At the tomb of Cyrus the Great in Pasargadae, he spoke words that still resonate:

“Cyrus, great King, King of Kings, Achaemenian King, King of the land of Iran. I, the Shahanshah of Iran, offer thee salutations from myself and from my nation. Rest in peace, for we are awake, and we will always stay awake.”

Today, his son **Reza Pahlavi** continues this sacred duty—not as a would-be monarch, but as a voice for democratic transition, secular governance, and national unity. He has explicitly stated he seeks no throne, only the freedom of his people.

2.3 A Secular, Democratic Iran

The CYRUS token and its community stand for the same principles Reza Pahlavi has championed:

- **Secularism** — Separation of religion and state, as Cyrus practiced
- **Democracy** — Government by consent of the governed
- **Human Rights** — The Cyrus Cylinder as our founding document
- **National Unity** — Persians, Kurds, Azeris, Baluch—all children of Iran
- **Territorial Integrity** — One Iran, undivided
- **Women’s Equality** — The rights Cyrus granted restored and expanded

We do not seek to impose any leader. We seek to empower the Iranian people to choose their own future. But we believe that future must be rooted in the values of Cyrus—the values that made Persia great.

3 Why Blockchain?

3.1 Censorship Resistance for a Censored People

The Islamic Republic has built one of the world's most sophisticated censorship systems. VPNs are blocked. Social media is filtered. Bank accounts are frozen for political activity. Journalists are imprisoned for tweets.

Blockchain breaks these chains.

- **No central authority can freeze CYRUS** — Unlike bank accounts
- **No government can censor transactions** — The blockchain is global
- **No border restricts participation** — Iranians inside and outside can hold CYRUS
- **Transparent treasury** — Every rial/dollar accounted for on-chain
- **Democratic governance** — No single leader controls the funds

3.2 Sanctions Workaround for Humanitarian Aid

International sanctions—while targeting the regime—have devastated ordinary Iranians. The banking system is cut off. Remittances are nearly impossible. Families are separated from financial support.

Cryptocurrency offers a lifeline:

- Diaspora can support families without banking intermediaries
- Humanitarian aid can flow directly to those in need
- Activists inside Iran can receive support safely
- Cultural organizations can receive funding despite restrictions

Note: CYRUS is designed for legitimate humanitarian and cultural purposes. We condemn any use that violates applicable laws and will work with legal counsel to ensure compliance.

3.3 Building the Infrastructure for Free Iran

When Iran is free—and it *will* be free—it will need modern financial infrastructure. The CYRUS community is building:

- Experience in decentralized governance (for future democratic institutions)
- Technical expertise in blockchain (for Iran's digital economy)
- Global networks of Persian professionals (for reconstruction)
- Capital reserves (for rebuilding infrastructure, schools, hospitals)
- Transparent treasury management (model for accountable government)

We are not just waiting for freedom. We are building the tools and skills that a free Iran will need.

4 The Legacy of Cyrus the Great

*“Be a lamp, or a lifeboat, or a ladder.
 Help someone’s soul heal.
 Walk out of your house like a shepherd.”*

— Rumi

4.1 Kourosh-e Bozorg: The Great King

Cyrus II of Persia, known in Persian as Kourosh-e Bozorg (Cyrus the Great), was born around 600 BCE in Anshan, a region in what is now Fars Province, Iran. The very name “Persia” derives from Pars (or Fars), the homeland of Cyrus’s people.

From these origins, Cyrus would create something the world had never seen: an empire built not on fear and forced submission, but on respect for the dignity of all peoples. His approach was so revolutionary that 2,500 years later, we still look to him as a model of enlightened leadership.

The Rise of the Achaemenid Empire:

- **559 BCE:** Cyrus becomes King of Anshan, a Persian tributary state
- **550 BCE:** Defeats the Median Empire; Persia and Media unite
- **547 BCE:** Conquers Lydia and the wealthy King Croesus
- **539 BCE:** Takes Babylon peacefully; issues the Cyrus Cylinder
- **538 BCE:** Proclaims the Edict of Restoration; frees the Jews
- **530 BCE:** Dies in battle defending the empire’s eastern frontier

At its height under Cyrus, the Achaemenid Empire encompassed over 5.5 million square kilometers and 44% of the world’s population—the largest empire in human history by percentage of global population.

4.2 The Cyrus Cylinder: Birth of Human Rights

In 1879, archaeologists excavating in Babylon discovered a clay cylinder covered in Akkadian cuneiform script. This artifact, now housed in the British Museum, proved to be nothing less than humanity’s first declaration of human rights.

The Cyrus Cylinder proclaims principles that would not be formally codified again until the 20th century:

Excerpts from the Cyrus Cylinder:

“I am Cyrus, king of the world, great king, mighty king, king of Babylon, king of Sumer and Akkad, king of the four quarters of the world...”

“When I entered Babylon in a peaceful manner, I took up my lordly abode in the royal palace amidst rejoicing and happiness...”

“I did not allow any to terrorize the land of Sumer and Akkad. I kept in view the needs of Babylon and all its sanctuaries to promote their well-being...”

“I freed all slaves. I put an end to their misfortunes and slavery...”

“I gathered all their peoples and restored them to their homelands...”

In 1971, the United Nations officially recognized the Cyrus Cylinder as the world's first charter of human rights. A replica is prominently displayed at UN headquarters in New York, and October 29 is celebrated as Cyrus the Great Day worldwide.

4.3 Liberation of the Jews: The Messiah King

Perhaps the most celebrated act of Cyrus was the liberation of the Jewish people from the Babylonian Captivity. For nearly 50 years, the Jews had been exiled from their homeland, their First Temple destroyed, their people scattered and enslaved.

When Cyrus conquered Babylon in 539 BCE, he issued the Edict of Restoration, allowing the Jews to return to Jerusalem and rebuild their temple. He returned the sacred vessels that had been looted and even provided funding for the temple's reconstruction.

For this act of liberation, Cyrus holds a unique honor: he is the **only non-Jewish figure** in the Hebrew Bible to be called "Mashiach" (Messiah, or "anointed one"):

"Thus says the Lord to his anointed, to Cyrus, whose right hand I have grasped to subdue nations before him... For the sake of my servant Jacob, and Israel my chosen, I call you by your name; I name you, though you do not know me."

— Isaiah 45:1-4

This recognition from another people's scripture demonstrates the universal impact of Cyrus's principles of freedom and tolerance.

4.4 Pasargadae: First Capital of the World Empire

Cyrus established his capital at Pasargadae in Fars Province, creating a city that embodied his vision of a multicultural empire. Key features include:

- **The Persian Garden (Pairidaeza):** The first formal gardens, from which we derive the word "paradise"
- **Architectural Fusion:** Buildings incorporating styles from Lydia, Babylon, Egypt, and Assyria
- **The Tomb of Cyrus:** A simple stepped structure bearing one of history's most humble epitaphs

The Epitaph of Cyrus the Great:

*"O man, whoever you are, from wherever you come,
for I know you shall come—
I am Cyrus, who founded the Persian Empire.
Do not grudge me this patch of earth that covers my body."*

— Inscription at the Tomb of Cyrus, Pasargadae

This humble inscription, from the most powerful man in the ancient world, speaks to the character of Cyrus—a conqueror who sought not glory but justice, not tribute but tolerance.

5 The PARS Community & Diaspora

*"Human beings are members of a whole,
In creation of one essence and soul."*

*If one member is afflicted with pain,
Other members uneasy will remain.”*

— Saadi (Muslih-ud-Din Mushrif ibn Abdullah)

5.1 The Global Persian Family

The Persian diaspora is one of the largest and most accomplished in the world. An estimated 8 million people of Persian/Iranian heritage live outside Iran:

Region	Estimated Population
United States (esp. Los Angeles)	1,500,000+
Europe (Germany, UK, France, Sweden)	1,200,000+
Canada (esp. Toronto, Vancouver)	400,000+
Australia	100,000+
UAE & Gulf States	500,000+
Israel	250,000+
Turkey	200,000+
Other countries	1,000,000+

Table 1: Global Persian/Iranian Diaspora Distribution

Los Angeles alone has earned the nickname “Tehrangoles” for its vibrant Persian community—the largest concentration of Iranians outside Iran itself.

5.2 Cultural Preservation Challenges

The Persian diaspora faces significant challenges in preserving its heritage:

- **Language Erosion:** Second and third-generation diaspora members often lose fluency in Farsi
- **Cultural Disconnect:** Distance from homeland weakens ties to traditions and history
- **Scattered Resources:** Community organizations operate in silos without coordination
- **Historical Sites at Risk:** Ancient Persian sites face deterioration and underfunding
- **Brain Drain:** Talented Persians contribute to other nations rather than Persian community initiatives

5.3 CYRUS: A Unifying Force

CYRUS token creates a decentralized platform to address these challenges:

1. Digital Persian Community

- Connect diaspora members across time zones and borders
- Create a shared identity around the principles of Cyrus the Great
- Build bridges between Persian communities worldwide

2. Cultural Preservation

- Fund Persian language schools and programs

- Support museums and cultural centers
- Digitize and preserve Persian manuscripts, art, and artifacts
- Create educational content about Persian history

3. Heritage Tourism

- Promote visits to Pasargadae, Persepolis, and other ancient sites
- Support archaeological research and preservation
- Create virtual reality experiences of ancient Persia

4. Humanitarian Initiatives

- Support refugees and displaced Persians
- Fund educational scholarships for Persian youth
- Provide emergency relief following disasters
- Continue Cyrus's mission of liberation and dignity

6 Tokenomics

6.1 Token Overview

Parameter	Value
Token Name	Cyrus the Great
Token Symbol	CYRUS
Total Supply	1,000,000,000 (1 Billion)
Blockchain	Base (Ethereum L2)
Token Standard	ERC-20
Denomination	USDT
Initial Price	\$0.01
Target Price	\$1.00 (100X)

Table 2: CYRUS Token Specifications

6.2 Distribution Model

Allocation	Percentage	Tokens	Purpose
Bonding Curve Sale	90%	900,000,000	Public distribution
LP Reserve	10%	100,000,000	Initial liquidity
Total	100%	1,000,000,000	

Table 3: Token Distribution

Key Principles:

- **No Team Allocation:** All tokens go to community

- **No VC Rounds:** No insider advantages
- **No Pre-sale:** Everyone starts equal
- **Fair Launch:** Bonding curve ensures transparent pricing

6.3 Bonding Curve Mechanism

CYRUS uses a **quadratic bonding curve** to create a fair, transparent price discovery mechanism that rewards early believers while remaining accessible to later participants.

How It Works:

1. 90% of tokens (900M) are sold through the bonding curve
2. Price starts at \$0.01 and increases along a quadratic curve
3. Final price reaches \$1.00 when the curve completes
4. All purchases are denominated in USDT for price stability

The Quadratic Formula:

$$P(q) = P_0 + k \cdot q^2 \quad (1)$$

Where:

- $P(q)$ = Price at quantity q sold
- P_0 = Initial price (\$0.01)
- k = Curve constant calibrated for 100X growth
- q = Cumulative tokens sold (0 to 900M)

Price Progression Example:

Tokens Sold	Price (USDT)	Multiple from Start
0 (Start)	\$0.01	1X
90,000,000 (10%)	\$0.02	2X
270,000,000 (30%)	\$0.10	10X
450,000,000 (50%)	\$0.26	26X
630,000,000 (70%)	\$0.50	50X
810,000,000 (90%)	\$0.82	82X
900,000,000 (100%)	\$1.00	100X

Table 4: Bonding Curve Price Progression

Why Quadratic?

A quadratic curve (rather than linear) creates a gentler price increase at the beginning, giving the community more time to accumulate at lower prices. The steeper curve at the end rewards early participants who took risk when the project was young.

6.4 LP Reserve Mechanism

The 10% LP Reserve (100M tokens) serves critical functions:

1. **Initial Liquidity:** Seeded at \$0.01 with USDT pairing
2. **Price Floor:** Provides baseline liquidity for trading
3. **Market Making:** Ensures smooth trading experience
4. **Transition:** Supports migration from bonding curve to DEX

LP Launch Parameters:

- 100,000,000 CYRUS tokens
- \$1,000,000 USDT paired (at \$0.01/token)
- Locked for 12 months minimum
- Managed by DAO after lock period

6.5 USDT Denomination

All CYRUS purchases through the bonding curve are denominated in USDT (Tether) rather than volatile cryptocurrencies. This provides:

- **Price Clarity:** Know exactly what you're paying
- **Stability:** No slippage from underlying asset volatility
- **Accessibility:** Familiar denomination for newcomers
- **Treasury Stability:** DAO treasury maintains value

7 DAO Governance

7.1 The CYRUS DAO

Following in the tradition of Cyrus's consultative governance, the CYRUS DAO empowers token holders to direct the community's resources and initiatives.

Governance Principles:

1. **One Token, One Vote:** Democratic participation
2. **Transparent Treasury:** All funds visible on-chain
3. **Proposal System:** Any holder can propose initiatives
4. **Timelock:** Major decisions require deliberation period
5. **Multi-sig Execution:** Prevents unilateral action

7.2 Community Treasury

Funds raised through the bonding curve flow to the Community Treasury, governed entirely by CYRUS holders:

Treasury Sources:

- Bonding curve sale proceeds
- Trading fee allocation (if implemented)
- Donations and partnerships
- Investment returns (governed by DAO)

Treasury Uses (determined by governance):

- Cultural preservation grants
- Educational program funding
- Humanitarian initiatives
- Community events and gatherings
- Historical site preservation
- Marketing and growth initiatives
- Emergency relief funds

7.3 Grant Programs

The CYRUS DAO will establish formal grant programs for:

1. Cultural Preservation Grants

- Persian language schools worldwide
- Cultural centers and community spaces
- Museum exhibitions on Persian history
- Digital preservation of manuscripts and art

2. Educational Grants

- Scholarships for Persian studies
- Research on ancient Persian history
- Development of educational curricula
- Online courses and content creation

3. Humanitarian Grants

- Refugee assistance programs
- Disaster relief for Persian communities
- Medical assistance programs
- Human rights advocacy organizations

4. Heritage Grants

- Archaeological site preservation
- Virtual reality heritage experiences
- Heritage tourism promotion
- Documentary and media production

7.4 Governance Process

1. **Proposal Submission:** Any holder with 100,000+ CYRUS can submit proposals
2. **Discussion Period:** 7 days for community discussion
3. **Voting Period:** 5 days for token-weighted voting
4. **Timelock:** 48 hours before execution
5. **Execution:** Multi-sig executes approved proposals

Quorum Requirements:

- Standard proposals: 5% of circulating supply
- Treasury proposals (>1% of treasury): 10% of circulating supply
- Constitutional changes: 20% of circulating supply

8 Governance Framework: Building a Respectable Institution

*“The lion and the lizard keep the courts
Where Jamshyd gloried and drank deep.”*

— Omar Khayyam

Empires fall when governance fails. The CYRUS DAO is designed to endure—not through force, but through legitimacy, transparency, and institutional excellence. This section details the governance framework that will make CYRUS a respected institution worthy of the Persian legacy.

8.1 The CYRUS Constitution

The DAO operates under a written constitution that establishes fundamental principles, rights, and constraints. The constitution is stored on-chain and can only be amended through super-majority governance.

8.1.1 Constitutional Principles

The CYRUS Constitution — Core Principles

Article I: Mission

The CYRUS DAO exists to unite the Persian diaspora, preserve Persian culture and heritage, support humanitarian causes, and advance the cause of freedom for Iran and all peoples.

Article II: Rights of Members

1. Every token holder has the right to vote on proposals proportional to their holdings
2. Every token holder has the right to submit proposals (subject to threshold)
3. Every token holder has the right to access all treasury records and governance data
4. No member may be excluded based on ethnicity, religion, gender, or political belief

Article III: Constraints on Power

1. No single entity may control more than 10% of voting power (excess votes do not count)
2. No treasury disbursement may exceed 5% of total treasury without supermajority approval
3. No constitutional amendment may take effect in less than 30 days
4. The multi-sig may not act without on-chain governance approval except in emergencies

Article IV: Prohibited Actions

1. The DAO may not fund violence or terrorism
2. The DAO may not discriminate in grant-making based on protected characteristics
3. The DAO may not engage in securities offerings or financial fraud
4. The DAO may not knowingly violate applicable laws in member jurisdictions

8.1.2 Amendment Process

Constitutional amendments require:

1. Proposal by holder(s) with $\geq 1\%$ of circulating supply
2. 14-day discussion period
3. 67% supermajority approval
4. 20% quorum of circulating supply
5. 30-day timelock before implementation
6. Ratification by multi-sig (ministerial, not discretionary)

Type	Threshold	Quorum	Approval	Timelock
Standard	100K CYRUS	5%	50%+1	48 hours
Treasury (<1%)	100K CYRUS	5%	50%+1	48 hours
Treasury (1-5%)	500K CYRUS	10%	60%	72 hours
Treasury (>5%)	1M CYRUS	15%	67%	7 days
Constitutional	10M CYRUS	20%	67%	30 days
Emergency	Multi-sig only	N/A	4-of-7	None

Table 5: Proposal Types and Requirements

8.2 Proposal Types and Thresholds

8.3 Board of Directors & Leadership

The CYRUS DAO operates under the guidance of a Board of Directors that provides strategic direction and institutional legitimacy while preserving decentralized governance principles.

8.3.1 Founding Chair: Cyrus Pahlavi

Cyrus Pahlavi

Founding Chair of the CYRUS Board

Cyrus Pahlavi serves as the Founding Chair of the CYRUS Board, providing strategic leadership and representing the continuity of Persian civilization's highest values. His role embodies:

- **Founding Vision:** Establishing CYRUS as the legitimate voice of the Persian diaspora
- **Strategic Leadership:** Guiding the organization through its formative years
- **Institutional Building:** Creating governance structures worthy of the Persian legacy
- **Coalition Building:** Uniting diverse voices within the Iranian freedom movement

The Founding Chair provides executive leadership while respecting DAO governance principles. Treasury funds remain controlled by the multi-signature council, and constitutional amendments require token holder supermajority approval.

Future Board Evolution: The Board structure is designed to evolve. Crown Prince Reza Pahlavi may be invited to serve as Honorary Chair or Board member as the organization matures, strengthening CYRUS's connection to the broader Iranian freedom movement.

8.3.2 Board Composition

The Board of Directors consists of 9 members:

- **1 Founding Chair:** Cyrus Pahlavi (initial term: 3 years, renewable by DAO vote)
- **3 Appointed Directors:** Selected by the Chair, confirmed by DAO vote
- **3 Elected Directors:** Elected by token holders annually
- **2 Ex-Officio Directors:** Multi-sig Council Chair + Technical Lead

8.3.3 Board Responsibilities

1. Set strategic direction and annual priorities
2. Approve major partnerships and institutional relationships
3. Appoint and oversee Multi-Signature Council members
4. Represent CYRUS in diplomatic and governmental contexts
5. Safeguard the mission and values of the organization
6. Prepare for eventual transition to sovereign Iranian governance

8.3.4 Board Limitations

The Board may **not**:

- Override on-chain governance votes
- Directly access treasury funds (multi-sig only)
- Amend the constitution without supermajority token holder approval
- Act contrary to the fundamental mission of Persian liberation

8.4 Multi-Signature Council

The DAO's treasury and execution functions are controlled by a 7-member multi-signature council requiring 4-of-7 signatures for transactions. The Multi-Sig Council reports to the Board and executes its directives within the bounds of on-chain governance.

8.4.1 Council Composition

- **3 Community-Elected Members:** Elected annually by token vote
- **2 Technical Members:** Security and smart contract experts
- **1 Legal/Compliance Member:** Legal expertise in relevant jurisdictions
- **1 Cultural/Academic Member:** Persian studies or cultural expertise

8.4.2 Council Requirements

- **Geographic Diversity:** No more than 3 members from same country
- **Term Limits:** Maximum 2 consecutive one-year terms
- **Conflict Disclosure:** Must disclose all material conflicts of interest
- **KYC/Background:** Identity verified (kept confidential except to auditors)
- **Compensation:** Modest stipend approved by governance (transparent)
- **Removal:** Can be removed by 67% vote for cause

8.4.3 Council Duties

1. Execute approved governance proposals (ministerial function)
2. Respond to emergencies per Emergency Procedures
3. Verify grant recipient eligibility and KYC
4. Publish monthly treasury reports
5. Coordinate annual audits
6. Represent DAO in legal matters (via designated counsel)

8.5 Treasury Management

8.5.1 Treasury Structure

Allocation	Purpose	Access	Target %
Operating	Day-to-day expenses	Multi-sig	5%
Grants	Approved grant disbursements	Multi-sig + Gov	40%
Strategic	Long-term investments	Governance only	30%
Emergency	Crisis response	Multi-sig (emergency)	10%
Locked	Cannot be spent	Time-locked	15%

Table 6: Treasury Allocation Structure

8.5.2 Financial Controls

- **Segregation of Duties:** Proposal creators cannot be sole approvers
- **Spending Limits:** Daily limits on multi-sig without governance
- **Dual Authorization:** Large transactions require 2 separate approval sessions
- **Cooling-Off Period:** 24-hour delay between approval and execution for transactions >1% treasury
- **Automated Alerts:** Community notified of all transactions >0.1% treasury

8.5.3 Investment Policy

Treasury funds not immediately needed for operations shall be:

- Held in stablecoins (USDC, USDT) for stability
- Diversified across multiple custody solutions
- Never staked in high-risk DeFi protocols without governance approval
- Never used for speculative trading
- Subject to annual investment policy review

8.6 Transparency and Reporting

8.6.1 Public Dashboards

The following information shall be publicly available in real-time:

- Treasury balances across all wallets
- All transactions with descriptions
- Voting records for all proposals
- Multi-sig member identities (or verified pseudonyms)
- Grant recipient list (with privacy protections where needed)

8.6.2 Regular Reports

Report	Frequency	Contents
Treasury Report	Monthly	Balances, inflows, outflows, allocations
Grant Report	Quarterly	Recipients, amounts, outcomes, impact
Governance Report	Quarterly	Proposals, votes, participation rates
Annual Report	Yearly	Comprehensive review, audited financials

Table 7: Reporting Schedule

8.6.3 Independent Audits

- **Smart Contract Audits:** Before deployment and after major upgrades
- **Financial Audits:** Annual audit by reputable crypto-native firm
- **Security Audits:** Annual penetration testing and security review
- **Governance Audits:** Periodic review of governance health metrics

8.7 Code of Conduct and Ethics

8.7.1 Member Conduct

All CYRUS community members agree to:

- Treat fellow members with respect and dignity
- Engage in good-faith discussion and debate
- Disclose conflicts of interest when voting
- Refrain from market manipulation or insider trading
- Protect the privacy and safety of vulnerable members
- Report suspected fraud, abuse, or security issues

8.7.2 Council Member Ethics

Multi-sig council members must:

- Act solely in the interest of the DAO and its mission
- Disclose all material conflicts before any vote
- Recuse from decisions where they have personal interest
- Maintain confidentiality of sensitive information
- Never use DAO resources for personal benefit
- Cooperate with audits and investigations

8.7.3 Conflict of Interest Policy

Conflict of Interest Disclosure Requirements:

1. Any proposal where the submitter or their affiliates would receive >1% of the disbursement
2. Any vote where the voter has material interest in the outcome
3. Any council decision involving entities the council member is affiliated with
4. Ongoing relationships with grant recipients, vendors, or partners

Undisclosed conflicts discovered after the fact may result in proposal reversal, removal from council, or community sanction.

8.7.4 Whistleblower Protection

The DAO commits to:

- Anonymous reporting channels for fraud, abuse, or misconduct
- Non-retaliation against good-faith whistleblowers
- Investigation of all credible reports
- Public disclosure of investigation outcomes (protecting privacy)
- Rewards for whistleblowers who expose significant fraud (up to 10% of recovered funds)

8.8 Emergency Procedures

8.8.1 Emergency Types

Level	Trigger	Response
Level 1	Smart contract vulnerability	Pause contracts, assess
Level 2	Active exploit in progress	Emergency withdrawal, patch
Level 3	Existential threat	Full shutdown, legal response

Table 8: Emergency Response Levels

8.8.2 Emergency Powers

The multi-sig council may act without governance approval **only** to:

1. Pause smart contracts to prevent loss of funds
2. Blacklist addresses involved in active exploits
3. Move funds to secure backup wallets
4. Engage emergency legal counsel

All emergency actions must be:

- Reported to community within 24 hours
- Ratified by governance within 7 days (or reversed)
- Documented in post-mortem report within 30 days

8.8.3 Disaster Recovery

- Multi-sig keys stored in geographically distributed secure locations
- Dead-man switch: If 4+ signers unreachable for 90 days, recovery process activates
- Backup governance: If primary contracts fail, backup on alternative chain
- Legal continuity: Foundation documents filed in stable jurisdiction

8.9 Legal and Compliance Structure

8.9.1 Legal Wrapper

The CYRUS DAO operates through a legal entity structure:

- **CYRUS Foundation:** Non-profit foundation (jurisdiction TBD—likely Switzerland, Cayman, or Marshall Islands)
- **Purpose:** Hold IP, enter contracts, employ staff, interface with traditional institutions
- **Governance:** Foundation board elected by DAO governance
- **Limitations:** Foundation cannot act contrary to DAO governance

8.9.2 Regulatory Compliance

- **Securities Law:** CYRUS is a governance token, not a security; no promise of profits
- **AML/KYC:** Grant recipients and large holders subject to verification
- **Sanctions:** No transactions with OFAC-sanctioned entities (exception: humanitarian aid to Iranian civilians per OFAC exemptions)
- **Tax:** Foundation files appropriate tax returns; members responsible for own taxes
- **Legal Counsel:** Retained counsel in US, EU, and relevant jurisdictions

8.9.3 Jurisdictional Considerations

Important Notice on Iran Sanctions:

US and EU sanctions on Iran create legal complexity for Iranian diaspora projects. CYRUS takes the following position:

- We comply with all applicable sanctions laws
- We utilize humanitarian exemptions where available
- We do not transact with sanctioned individuals or entities
- We support humanitarian aid to Iranian civilians, which is generally permitted
- We advocate for smart sanctions that target the regime, not the people
- Members are responsible for their own jurisdictional compliance

Consult legal counsel before participating if you have concerns about sanctions compliance.

8.10 Dispute Resolution

8.10.1 Internal Disputes

Disputes between members or regarding governance shall be resolved through:

1. **Discussion:** Good-faith dialogue in community forums
2. **Mediation:** Volunteer mediators from community
3. **Arbitration Panel:** 3-member panel elected by governance
4. **Governance Vote:** Final resolution by token vote if needed

8.10.2 External Disputes

Disputes with external parties shall be resolved through:

- Foundation legal counsel negotiation
- Mediation through agreed neutral party
- Binding arbitration (ICC or similar)
- Litigation only as last resort

8.11 Governance Health Metrics

The DAO shall track and publish metrics indicating governance health:

8.12 Continuous Improvement

The governance framework itself is subject to continuous improvement:

- **Annual Review:** Comprehensive governance review each Nowruz
- **Community Feedback:** Standing proposal category for governance improvements

Metric	Target	Concern Level
Voter Participation	>30%	<10%
Proposal Success Rate	40-70%	<20% or >90%
Council Diversity (geo)	5+ countries	<3 countries
Token Concentration (top 10)	<40%	>60%
Time to Execution	<14 days	>30 days
Whistleblower Reports	Any	Unresolved >30 days
Audit Findings	0 critical	Any unresolved

Table 9: Governance Health Dashboard Metrics

- **Benchmarking:** Compare to best practices in other DAOs
- **Academic Input:** Engage governance researchers for periodic review
- **Failure Analysis:** Post-mortem on any governance failures

Governance is Not Bureaucracy

These structures exist not to slow us down, but to make us *trustworthy*.

A liberation movement that cannot govern itself honestly
has no business offering governance to a nation.

We will be the institution we wish Iran to become:
transparent, accountable, just, and free.

8.13 Transition to Sovereign Iran

The Ultimate Goal: Return to Iran

CYRUS exists to serve the Persian people. When Iran is free, governance should return to those it was always meant to serve.

The CYRUS DAO is designed as a *transitional institution*. Our ultimate purpose is not to govern the diaspora in perpetuity, but to support the liberation of Iran and then **transfer governance to the sovereign Iranian people**.

8.13.1 Handover Principles

1. **Democratic Legitimacy:** Governance may only be transferred to a legitimately elected, democratic Iranian government that respects human rights and rule of law
2. **Constitutional Alignment:** The receiving government must demonstrate commitment to the principles of the Cyrus Cylinder—freedom of religion, freedom from oppression, respect for human dignity
3. **Gradual Transition:** Transfer will occur in phases over 3-5 years, not as an abrupt handover
4. **Community Approval:** Handover requires 75% supermajority approval from token holders
5. **Asset Protection:** Mechanisms ensure treasury assets serve Persian cultural and humanitarian purposes even after transfer

8.13.2 Trigger Conditions

The handover process may be initiated when:

- A democratic election is held in Iran with international observation
- The elected government formally requests partnership with CYRUS
- The government demonstrates 2+ years of respecting human rights, press freedom, and minority rights
- A mutual agreement is reached on transition terms
- Token holders approve initiation by 67% majority

8.13.3 Handover Structure

Phase 1: Recognition (Year 1)

- Formal partnership agreement between CYRUS DAO and Iranian government
- Joint committee established with diaspora and government representatives
- Iranian representatives added to CYRUS Board (up to 3 seats)

Phase 2: Integration (Years 2-3)

- Treasury begins funding projects jointly selected with Iranian government
- Iranian Ministry of Culture/Heritage gains advisory role
- Gradual transfer of cultural preservation programs to Iranian institutions

Phase 3: Transition (Years 4-5)

- Majority of Board transitions to Iranian government appointees
- Treasury management transfers to joint diaspora-government foundation
- CYRUS token may be adopted as official cultural token (if desired by both parties)

Phase 4: Completion

- Full governance transferred to Iranian-majority institution
- Diaspora retains minority representation to ensure continuity
- Mission continues under sovereign Iranian leadership

8.13.4 Safeguards

- **Reversal Clause:** If the Iranian government reverts to authoritarian practices, token holders may vote (67%) to pause or reverse the transition
- **Protected Endowment:** 20% of treasury placed in permanent endowment that can never be seized—continues funding cultural preservation regardless of political changes
- **Diaspora Rights:** Diaspora token holders retain voting rights on cultural matters even after transition

- **International Oversight:** Transition monitored by recognized international bodies (UN, EU, etc.)

*“We do not build CYRUS to rule forever.
We build CYRUS to one day give it to a free Iran—
and to make that day come sooner.”*

9 Roadmap: Three Nowruz

*“Much have I labored, much have I toiled,
for thirty years, over this task.
I have revived the Persian language,
by means of this epic.”*

— Ferdowsi (Hakim Abul-Qasim Ferdowsi Tusi), author of the Shahnameh

The CYRUS token follows a deliberate three-phase roadmap aligned with Nowruz, the Persian New Year celebrated on the spring equinox. This symbolic alignment honors our heritage while creating a thoughtful, community-first launch.

9.1 Phase 1: Genesis (January 2026 → Nowruz 2026)

“I am Cyrus, king of Anshan...”

Bonding Curve Sale | No Transfers | Community Formation

- Token deployment on Base blockchain
- Bonding curve opens: \$0.01 starting price
- **Transfers locked** — tokens can only be purchased, not transferred
- Website and whitepaper publication
- Initial community formation
- Social media presence established
- No speculation — only believers accumulate

Why lock transfers? This prevents speculation and dumping during the critical formation period. Only those committed to the mission will participate — not flippers seeking quick profits.

9.2 Phase 2: Accumulation (Nowruz 2026 → Nowruz 2027)

“I gathered all their peoples...”

Nowruz 2026 (March 21): Transfers Enable | DEX Launch | Trading Begins

- **Transfers unlocked** on Nowruz 2026 (March 21, 2026)

- Liquidity pool deployed to DEX (Uniswap/Aerodrome on Base)
- Secondary market trading begins
- DAO governance goes live
- Community governance proposals begin
- Partnerships with Persian cultural organizations
- Persian community events worldwide
- 10,000+ token holders target

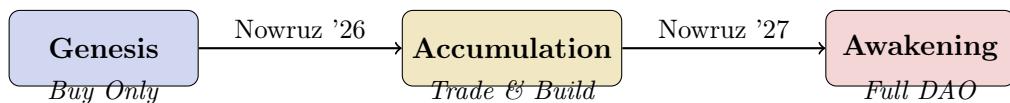

9.3 Phase 3: Awakening (Nowruz 2027+)

"I restored them to their homelands..."

Nowruz 2027: Full DAO Treasury Activation | Major Initiatives Launch

- Full 50% DAO treasury unlocks for governance
- Major grant programs launch
- Persian language school funding begins
- Cultural center partnerships established
- Heritage preservation initiatives
- Academic partnerships and scholarships
- Documentary and media productions
- International Persian heritage events
- 100,000+ community members target

9.4 The Vision: Nowruz to Nowruz

This deliberate, patient approach demonstrates our commitment to building something lasting — not a pump-and-dump scheme, but a genuine movement to unite the Persian diaspora and honor Cyrus the Great's legacy.

10 The Vision: A Free Iran

10.1 What We Are Building Toward

We are not building a cryptocurrency project. We are building the infrastructure for Iranian liberation and reconstruction. When the Islamic Republic falls—and it *will* fall—we will be ready.

The Iran We Will Build

Secular	Religion is personal, government is for all
Democratic	Chosen by the people, accountable to the people
Federal	Respecting all ethnicities and regions
Modern	Leading in technology, science, culture
Prosperous	An economy worthy of our human capital
Free	The Cyrus Cylinder as our constitution

10.2 The DAO's Role in Liberation

The CYRUS DAO treasury will fund direct action for Iranian freedom:

Immediate Priorities:

- **Secure Communications** — Fund VPN and encryption tools for activists inside Iran
- **Protest Support** — Legal defense, medical aid, family support for arrested protesters
- **Media Operations** — Independent Persian journalism, documentary production
- **International Advocacy** — Lobbying democratic governments for support
- **Activist Networks** — Connecting cells inside Iran with diaspora resources

Transition Phase (When the Regime Falls):

- **Interim Government Support** — Technical expertise for transition administration
- **Election Infrastructure** — Transparent voting systems for first free elections
- **Security Sector Reform** — Training for democratic policing
- **Media Pluralism** — Funding independent newspapers, TV, radio
- **Civil Society** — Grants for NGOs, unions, professional associations

Reconstruction Phase:

- **Schools** — Rebuild secular education from primary to university
- **Healthcare** — Modern hospitals, clinics, medical training
- **Infrastructure** — Roads, bridges, telecommunications
- **Environment** — Restore Lake Urmia, forests, air quality
- **Cultural Sites** — Preserve Persepolis, Pasargadae, Isfahan
- **Repatriation Support** — Help diaspora families return home

10.3 A Call to Every Persian

This is bigger than any token, any investment, any individual. This is about:

Your grandmother who still dreams of the Iran of her youth.

Your cousins who cannot speak freely in their own country.

The young woman who removed her hijab and was beaten for it.

The student who tweeted and was imprisoned for it.

The poet whose words are banned from bookstores.

The 2,500 years of civilization that refuse to be erased.

Every CYRUS token you hold is a vote for freedom. Every proposal you support is a brick in the foundation of a new Iran. Every Persian you bring into this community strengthens our collective power.

Mā Hamē Bā Ham Hastīm

We Are All Together

The regime divides us by ethnicity, by religion, by politics.
CYRUS unites us by heritage, by values, by destiny.

Persian, Kurd, Azeri, Baluch, Lor, Gilaki, Arab—
We are all children of Cyrus. We are all Iran.

11 Liberation Infrastructure: Theory & Design

*We were scattered like dust in the wind—
then we remembered we are one fire.
Not to burn the world—
to light a path home.*

This section grounds our mission in political philosophy and institutional design. Freedom is not vibes—it is engineering. The following framework synthesizes classical political theory with modern mechanism design to explain *why* decentralized, transparent institutions outcompete authoritarian alternatives, and *how* CYRUS instantiates these principles.

11.1 Political Foundations: Why Free Republics Prevail

11.1.1 Rousseau: Legitimacy Requires Consent

Jean-Jacques Rousseau's core insight remains foundational: political authority is legitimate only if it arises from a contract among equals, oriented toward the common interest rather than the ruler's interest. The “general will” is not mob mood—it is the institutionalized expression of the common good under rules that apply equally to all.

CYRUS Application:

- A community treasury is only “ours” if the rules of spending are consented to, auditable, and amendable by the governed
- Freedom is not sentiment; it is rule-bound self-government
- DAO governance implements Rousseau’s vision: transparent rules, equal standing, institutions that convert collective preferences into binding decisions without privileging any caste, clerical class, or faction

11.1.2 Montesquieu: Tyranny as Systems Failure

Charles de Montesquieu’s insight cuts deeper than “bad leaders.” Tyranny is what happens when legislative, executive, and judicial power collapse into one hand. The remedy is structural—separation of powers plus checks and balances.

CYRUS Application:

- A DAO is not automatically democratic
- It must be designed so that proposers cannot instantly execute
- Execution must be constrained (timelock + multisig)
- Constitutional changes require supermajorities
- Power is distributed, slowed, and made reversible

Montesquieu’s Principle:

“When the same actor controls rule-making, enforcement, and adjudication, despotism becomes a default. A free republic is therefore an engineering problem: distribute power, slow it down, and make it reversible.”

11.1.3 Marx: Centralized Power Becomes Class Power

Karl Marx's durable critique warns that centralized institutions tend to become instruments of a ruling class, even when they claim sacred legitimacy. Whether “class” is defined by money, party membership, or clerical hierarchy, the pattern holds: centralization → capture → coercion.

CYRUS Application:

- The point is not to “install Marxism”
- The point is to take the warning seriously: *any concentrated power will be captured*
- Design must assume capture attempts are constant
- Decentralization is not ideology—it is defensive engineering

11.2 Why Democracy Outcompetes Authoritarianism

11.2.1 The Democracy Dividend: Growth & Innovation

Empirical research demonstrates that democracy causally increases long-run economic performance through education, broader opportunity, accountability, and lower extractive risk.

- Authoritarian systems can spike growth briefly via coercion
- But innovative, resilient prosperity is more compatible with open institutions, predictable law, and broad participation
- Iran’s brain drain—millions of educated Persians building other nations’ economies—is direct evidence of authoritarian waste

11.2.2 Women’s Rights as Macroeconomic Capacity

If half your population is legally constrained, your economy is constrained. Modern research repeatedly quantifies large welfare losses from gender inequality.

Women’s equality is not only moral—it is state capacity:

Productivity • Entrepreneurship • Legitimacy • Social Stability

The Islamic Republic’s systematic oppression of women is not just a human rights violation—it is economic self-sabotage. A free Iran with full gender equality would unlock trillions in human potential.

11.3 Why Blockchain Belongs in Liberation (Without Magic Thinking)

11.3.1 What Blockchains Actually Add

- **Credible Neutrality:** Rules execute the same way for insiders and outsiders
- **Auditability:** Treasury flows are inspectable by anyone, anywhere
- **Composability:** Grants, identity, voting, budgeting become reusable primitives
- **Diaspora Coordination:** Pooled funding and governance across borders, beyond any single jurisdiction
- **Censorship Resistance:** No central authority can freeze accounts or block participation

11.3.2 What Blockchains Do Not Add

- They do not guarantee democracy
- They do not prevent oligarchy unless you design against it
- They do not make illegal activity acceptable

CYRUS is infrastructure for lawful civic coordination:

Transparent Funding • Community Governance • Durable Institutions

11.4 Constitutional Design: A Three-Branch DAO

Following Montesquieu, the CYRUS DAO implements separation of powers on-chain:

Branch	Function	Mechanism
Legislative	Deliberation + Voting	Token-weighted proposals
Executive	Operations + Implementation	Multisig execution
Judicial	Constitutional Review	Dispute resolution

Table 10: Three-Branch DAO Architecture

Anti-Capture Mechanisms:

- **Timelock:** 48-hour delay between approval and execution
- **Diverse Multisig:** Multiple signers with geographic and professional diversity, rotating terms
- **Constitution File:** Enumerated rights + spending constraints + amendment procedures
- **Supermajority Thresholds:** Constitutional changes require 67%+ approval with 20%+ quorum
- **Veto Period:** Community can block execution during timelock window

11.5 Mathematical Models: Quantifying Freedom

11.5.1 Tyranny Risk as a Function of Power Concentration

Let $C \in [0, 1]$ be a concentration index where 1 represents fully centralized power. We model capture risk as:

$$R_{\text{capture}}(C) = 1 - \exp(-\alpha C^\beta), \quad \alpha > 0, \beta > 1 \quad (2)$$

Interpretation: Once concentration rises, risk accelerates nonlinearly. This is the mathematical argument for separation of powers, timelocks, and transparency. Small increases in concentration near the top produce dramatic increases in capture risk.

11.5.2 Legitimacy as a Function of Participation and Fairness

Let p be participation rate and q be perceived fairness (auditability, equal rules). A legitimacy index:

$$L(p, q) = 1 - \exp(-\lambda \cdot p \cdot q), \quad \lambda > 0 \quad (3)$$

Interpretation: High legitimacy requires *both* participation and fair process. Neither alone suffices. A 50% participation rate with 80% perceived fairness yields higher legitimacy than 80% participation with rigged rules.

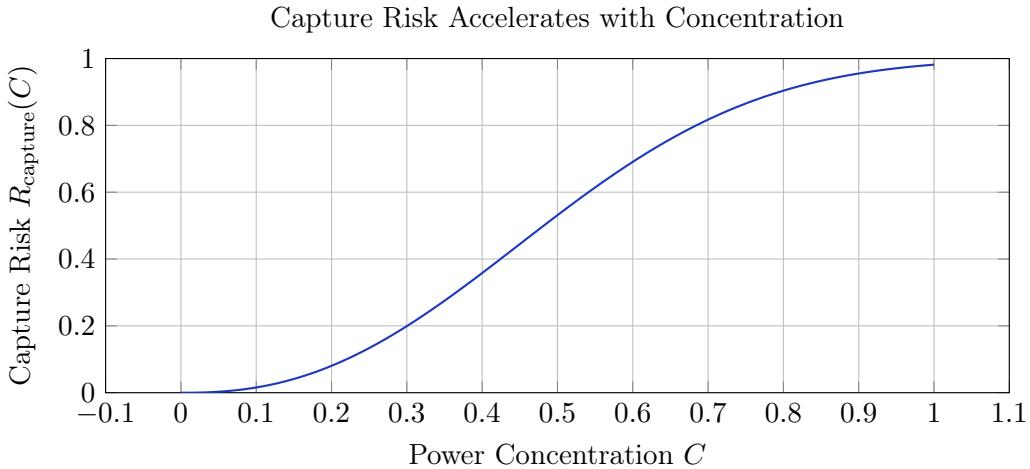

Figure 1: Capture risk accelerates nonlinearly as power concentrates. Design must keep C low.

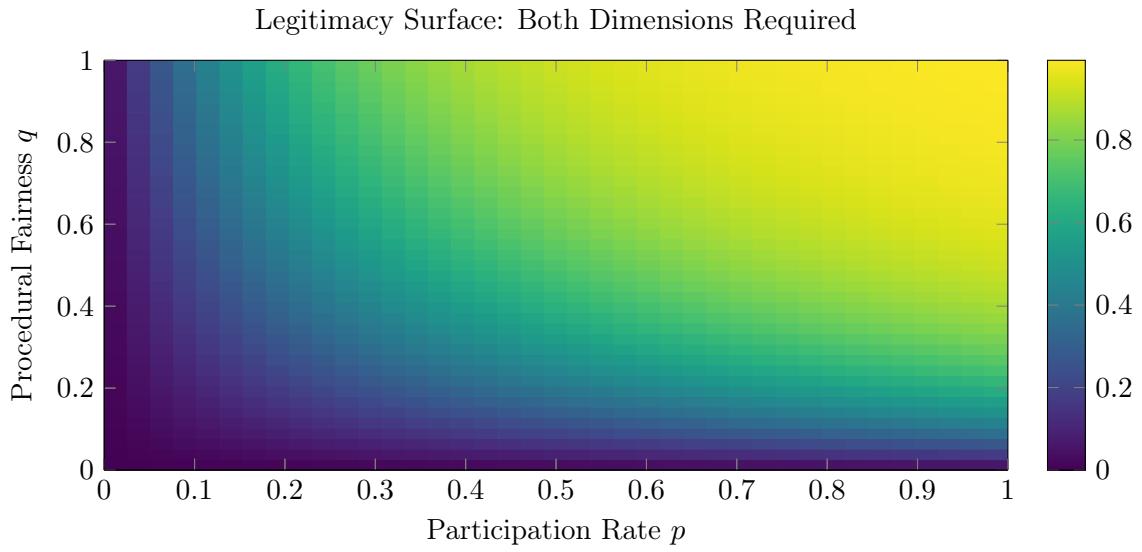

Figure 2: Legitimacy rises when both participation and procedural fairness are high.

11.5.3 Present Value of a Free Iran

We cannot price 2,500 years of civilization directly. But we can model the economic value of freedom using present value mathematics.

Let Y_t be annual “cultural + economic surplus” attributable to freedom and prosperity, with discount rate r :

$$PV = \sum_{t=1}^T \frac{Y_t}{(1+r)^t} \quad (4)$$

For long-horizon approximation with growth rate g where $r > g$:

$$PV_\infty \approx \frac{Y_1}{r-g} \quad (5)$$

Example: If a free Iran generates \$100B additional annual surplus over the status quo, with $r = 8\%$ and $g = 3\%$:

$$PV_{\infty} \approx \frac{\$100B}{0.08 - 0.03} = \$2 \text{ trillion}$$

This is not speculation—it is the standard approach to valuing long-duration assets.

11.5.4 Token Value from Captured Share

For transparency, we present the valuation identity that underlies any rational token pricing:

$$\text{Implied Price} \approx \frac{PV \cdot s \cdot m}{S} \quad (6)$$

Where:

- PV = Present value of the addressable “free Iran / diaspora coordination” economy
- s = Capture share (fraction of that economy CYRUS can coordinate)
- m = Value accrual fraction (what portion flows to tokenholders via governance, grants, utility)
- S = Circulating token supply

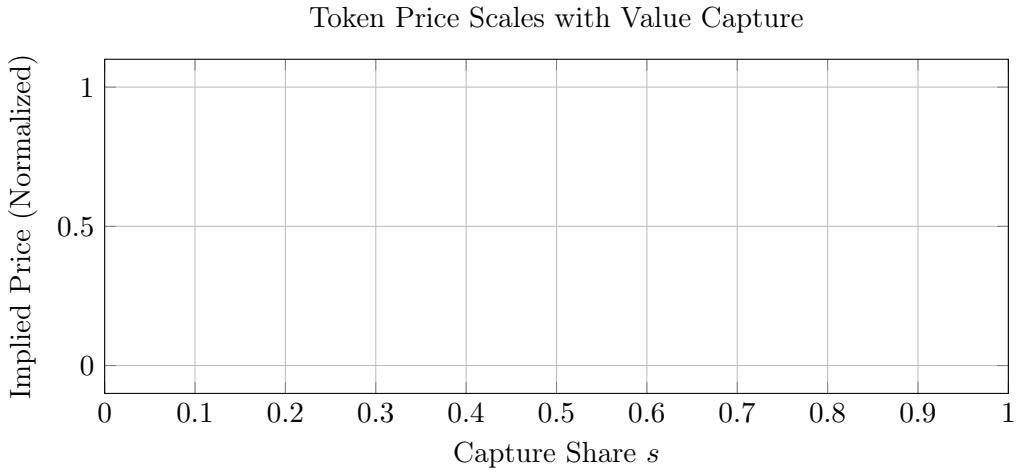

Figure 3: Price scales linearly with capture share; slope depends on value-accrual design.

Critical Note: The whitepaper is explicit that m depends on actual mechanisms—governance rights, treasury access, membership utility. Without concrete value accrual, $m \approx 0$ and token value is purely speculative. CYRUS designs for real utility through DAO governance and grant access.

11.6 How Freedom Wins: The Engineering Summary

Democracies win sustainably when they:

1. **Reduce the premium on fear:** Rule of law, rights protections, predictable governance make cooperation more attractive than coercion
2. **Increase the return to talent:** Education, women’s equality, open markets ensure that human capital is developed and deployed efficiently
3. **Prevent capture through design:** Checks, transparency, decentralization, and rotation make it structurally difficult for any faction to seize permanent control

This is the engineering lesson of constitutionalism (Montesquieu), legitimacy (Rousseau), and the critique of concentrated power (Marx).

11.7 The Velvet Path: Nonviolent Transition

*“Out beyond ideas of wrongdoing and rightdoing,
there is a field. I’ll meet you there.
When the soul lies down in that grass,
the world is too full to talk about.”*

— Rumi

The CYRUS community commits to the **velvet path**—liberation through legitimacy collapse, not through violence. This is not weakness; it is strategic wisdom rooted in Persian civilization’s deepest values.

11.7.1 Why Nonviolence Wins

History teaches that violent revolutions often replace one tyranny with another. The French Revolution gave way to the Terror, then Napoleon. The Russian Revolution produced Stalin. The Iranian Revolution of 1979 replaced a flawed monarchy with a theocratic nightmare.

Nonviolent transitions, by contrast, build lasting democracies:

- **Czechoslovakia’s Velvet Revolution (1989):** Peaceful protests, civil disobedience, and moral witness brought down communism without a shot
- **Poland’s Solidarity Movement:** Workers, intellectuals, and the Church created parallel institutions that made the regime irrelevant
- **South Africa’s Transition:** Despite immense provocation, the ANC chose negotiation and truth-and-reconciliation over vengeance
- **India’s Independence:** Gandhi’s satyagraha (truth-force) defeated the British Empire through moral authority

The pattern is clear: *regimes fall when they lose legitimacy, not when they lose battles.*

11.7.2 The Persian Way: Cyrus as Model

Cyrus the Great conquered Babylon without a battle. The gates opened because his reputation preceded him—a reputation for mercy, for honoring local customs, for freeing the enslaved rather than creating new slaves.

Cyrus conquered through legitimacy, not terror.

*The Babylonians welcomed him because he offered something better.
This is the model for Iran’s liberation: become so obviously better
that the regime collapses under the weight of its own illegitimacy.*

11.7.3 How the Diaspora Accelerates Legitimacy Collapse

The CYRUS DAO contributes to nonviolent regime change by:

1. **Demonstrating Competence:** A well-governed, transparent, effective diaspora institution proves Iranians can self-govern democratically
2. **Building Parallel Institutions:** Cultural organizations, educational programs, humanitarian networks that serve Iranians regardless of the regime

3. **Documenting Truth:** Funding journalism, human rights documentation, and historical preservation that expose the regime's crimes
4. **Maintaining Hope:** Every grant for a Persian language school, every scholarship, every cultural event tells Iranians: *we are building the future*
5. **Preparing Transition:** Training administrators, lawyers, educators, and civil servants who will staff a democratic Iran

We do not seek to destroy the regime. We seek to make it irrelevant.

11.8 Reconciliation, Not Revenge

*"If you are irritated by every rub,
how will you be polished?"*

— Rumi

When freedom comes—and it *will* come—we face a choice that will define Iran for generations: revenge or reconciliation.

The CYRUS community chooses reconciliation.

11.8.1 The Poison of Vengeance

After 1979, the new regime executed thousands. Families were destroyed. Communities were shattered. The cycle of violence that began then continues today—protesters shot, activists hanged, children killed.

If we respond to violence with violence, we perpetuate the cycle. We become what we sought to replace.

11.8.2 The South African Model

When apartheid fell, South Africa faced the same choice. Nelson Mandela and Desmond Tutu chose the Truth and Reconciliation Commission—not amnesty without accountability, but a process where perpetrators could confess their crimes in exchange for the truth being heard.

Iran will need something similar:

- **Truth:** Full documentation of crimes—executions, torture, corruption, theft
- **Acknowledgment:** Public recognition of what was done and to whom
- **Accountability:** Those who gave orders face justice; those who followed orders under duress may qualify for amnesty if they confess fully
- **Restitution:** Stolen assets returned; victims' families compensated
- **Healing:** National programs to process collective trauma

11.8.3 Who Is Our Enemy?

Our enemy is not the Iranian people who served the regime.

Our enemy is the *system*—the structures of oppression, the mechanisms of control, the ideology that crushes human dignity.

Many who work within the system do so to survive, to protect their families, to carve out small spaces of decency within an indecent structure.

When freedom comes, we will need them to help rebuild.

The revolutionary guards who defect, the bureaucrats who preserve records, the judges who quietly reduce sentences, the teachers who smuggle forbidden ideas into classrooms—these are not our enemies. They are Iranians trapped in an unjust system, waiting for the chance to do better.

11.8.4 The Example of Reza Pahlavi

Crown Prince Reza Pahlavi has consistently called for reconciliation rather than revenge. He has:

- Refused to demonize ordinary Iranians who work within the system
- Called for an inclusive transition that welcomes all Iranians
- Emphasized that he seeks no throne—only Iran's freedom
- Modeled dignity and restraint despite having every reason for bitterness

This is the Cyrus legacy: *mercy to the defeated, welcome to the convert, justice tempered with wisdom.*

11.9 The Romantic Vision: What a Free Iran Looks Like

*"I have lived on the lip of insanity,
wanting to know reasons,
knocking on a door. It opens.
I've been knocking from the inside."*

— Rumi

Let us paint the picture. Not as fantasy, but as vision—the Iran we are building toward, the Iran that awaits on the other side of this struggle.

11.9.1 The Return of Persian Culture

Imagine Tehran in spring. The Alborz mountains still snow-capped, the city blooming with cherry blossoms. But now:

- **Music fills the streets:** The tar and setar, the santur and kamancheh, the voices of singers no longer forbidden. Concerts in Azadi Square. Jazz clubs in Darband. Opera at Vahdat Hall.
- **Women walk freely:** Hair in the wind, faces to the sun. Fashion boutiques on Valiasr. Women CEOs, women judges, women ministers. A woman president, perhaps.

- **Artists create without fear:** Filmmakers telling true stories. Poets publishing without censors. Painters exhibiting without permission. Tehran as the cultural capital of the Middle East once more.
- **Young people dance:** In clubs, at weddings, in the streets during Nowruz. The joy that is every Iranian's birthright, restored.

11.9.2 The Healing of the Land

Iran's environment has been devastated by mismanagement. A free Iran will:

- **Restore Lake Urmia:** Once the largest lake in the Middle East, now a salt flat. With proper management, it can live again.
- **Replant the forests:** The Hyrcanian forests, older than the ice age, protected and expanded. The Zagros reforested.
- **Clean the air:** Tehran's smog replaced with the clear mountain air that once defined the city.
- **Protect the cheetahs:** The Asiatic cheetah, Iran's national animal, saved from extinction. Persian fallow deer roaming free.

11.9.3 The Return of the Diaspora

Eight million Iranians live abroad. Many dream of return. A free Iran means:

- **Grandchildren meeting grandparents:** Families reunited after decades of separation
- **Skills coming home:** Engineers, doctors, scientists, entrepreneurs bringing expertise built abroad
- **Investment flowing in:** Diaspora capital rebuilding infrastructure, starting businesses, creating jobs
- **Dual lives:** Some will return permanently. Others will split time. All will finally have the choice.

11.9.4 Iran Among Nations

A free, democratic Iran transforms the region:

- **Peace with neighbors:** No more funding of proxy wars. Normal relations with Arab states, Israel, the West.
- **Economic integration:** Iran's oil and gas, but also tech, tourism, agriculture. The Silk Road reborn.
- **Cultural leadership:** Persian language, art, and philosophy inspiring the world as they did for millennia.
- **Moral authority:** A nation that freed itself nonviolently, reconciled with its past, and built a just future. A model for others.

11.10 A Love Letter to Iran

*“Let the beauty we love be what we do.
There are hundreds of ways to kneel and kiss the ground.”*

— Rumi

To Iran—

You are not the regime that occupies you.

You are the mountains and the deserts, the Caspian shores and the Persian Gulf. You are Persepolis and Pasargadae, Isfahan and Shiraz. You are the poetry of Hafez and Rumi, the mathematics of Khayyam, the medicine of Avicenna.

You are the grandmother who still makes tahdig perfectly. The grandfather who recites Shahnameh from memory. The mother who teaches her daughter to read despite the morality police. The father who dreams of a better future for his sons.

You are the young woman who removed her hijab and walked into history. The student who tweeted and went to prison. The worker who struck. The artist who painted forbidden dreams. The musician who played forbidden songs.

You are 85 million people carrying 2,500 years of civilization in your hearts.

You are not defeated. You are not forgotten. You are not alone.

We, your children scattered across the earth, hold you in our hearts. We build this token, this DAO, this movement—not for profit, not for power—but for *you*.

Every CYRUS token is a vote for your freedom.

Every proposal passed is a brick in your future.

Every grant given is a seed planted in your soil.

We will not rest until you are free.

We will not rest until your daughters walk in sunlight.

Until your sons sing without fear.

Until your poets write without censors.

Until your scientists discover without limits.

Until your lovers love without hiding.

Mā hamē bā ham hastīm.

We are all together.

Zendeh bād Irān.

Long live Iran.

The CYRUS Thesis

A transparent, decentralized, constitutionally constrained DAO—
governed by the Persian diaspora, funded by the bonding curve,
and oriented toward liberation and reconstruction—
is a *structurally superior* institution for achieving freedom
compared to any centralized alternative.

This is not hope. This is design.

12 Join the Movement

12.1 For the Persian Diaspora

CYRUS is more than a token—it's a movement to unite and empower the global Persian community. Whether your family left Iran in 1979 or your ancestors were part of earlier migrations,

whether you speak fluent Farsi or are learning your heritage language, whether you live in Tehrangeles or a small town with no other Persians—CYRUS welcomes you.

How to Participate:

1. **Acquire CYRUS:** Purchase through the bonding curve with USDT
2. **Join the Community:** Connect with fellow Persians worldwide
3. **Participate in Governance:** Vote on proposals, submit ideas
4. **Share Your Heritage:** Create content, teach others
5. **Support Initiatives:** Contribute to cultural preservation

12.2 For Friends of Persia

You don't need Persian blood to appreciate the legacy of Cyrus the Great. His principles—freedom, tolerance, human dignity—belong to all humanity. We welcome anyone who shares these values.

- History enthusiasts interested in ancient Persia
- Human rights advocates inspired by the Cyrus Cylinder
- Cultural preservation supporters
- Anyone who believes in the principles Cyrus championed

13 Conclusion: The Spirit of Cyrus Lives On

Twenty-five centuries have passed since Cyrus the Great conquered Babylon and proclaimed freedom for the enslaved, dignity for the oppressed, and tolerance for all beliefs. Empires have risen and fallen. The world has transformed beyond recognition. Yet the principles he championed remain as vital as ever.

Today, millions of Persians live scattered across the globe—a diaspora born of upheaval but carrying within it the seeds of a great civilization. We carry the poetry of Rumi and Hafez in our hearts, the mathematics of Khayyam in our minds, and the principles of Cyrus in our souls.

But we also carry a burden: the knowledge that our homeland is not free.

For over forty years, the Iranian people have lived under a regime that betrays everything Cyrus stood for. Where he freed the enslaved, they imprison the innocent. Where he honored all faiths, they impose religious tyranny. Where he celebrated human dignity, they execute dissidents and beat women in the streets.

This ends with us.

The CYRUS token is not just a symbol—it is a tool. A tool for organizing the diaspora. A tool for funding resistance. A tool for building the institutions that a free Iran will need. A tool for turning our collective grief and anger into collective action.

When the historians of the future write the story of Iran's liberation, they will ask: “*Where were you? What did you do?*”

Let our answer be: “*We were there. We organized. We funded. We fought. We won.*”

As it is written at Pasargadae:

“*O man, whoever you are, from wherever you come,
for I know you shall come—
I am Cyrus, who founded the Persian Empire.*”

We have come, O Cyrus. We have come from Los Angeles and London, from Toronto and Tel Aviv, from every corner of the world where your children have scattered. We have come with blockchain as our tool and your principles as our guide.

And we will not rest until Iran is free.

Zendeh Bād Kourosh-e Bozorg

Long Live Cyrus the Great

Zendeh Bād Irān

Long Live Iran

14 The Path to Universal Liberty

“The wound is the place where the Light enters you.”

— Rumi

The struggle for Iranian freedom is part of a larger story—the story of humanity’s long march toward liberty. From the Cyrus Cylinder to the Magna Carta, from the Declaration of the Rights of Man to the Universal Declaration of Human Rights, from Gandhi’s salt march to Mandela’s long walk to freedom—we stand in a tradition of those who dared to imagine a world where every person lives in dignity.

14.1 Freedom as a Universal Principle

Cyrus the Great did not liberate only Persians. He freed Babylonians, Jews, Elamites, Medes—every people under his rule. His principle was universal: *all human beings deserve freedom and dignity, regardless of their origin, faith, or station.*

This universalism is our inheritance and our obligation.

The CYRUS Principles of Universal Liberty

1. **Dignity is inherent:** Every human being possesses inviolable dignity by virtue of being human
2. **Freedom is indivisible:** No one is truly free until all are free
3. **Power must be accountable:** Authority derives from consent and serves the governed
4. **Truth must be spoken:** Transparency and honest witness are moral imperatives
5. **Mercy transcends vengeance:** Justice seeks healing, not destruction
6. **The future belongs to builders:** Those who create outcompete those who destroy

14.2 The Tools of Liberation

Every liberation movement requires tools. Ours include:

- **Economic coordination:** The CYRUS token and DAO treasury
- **Transparent governance:** On-chain voting and constitutional constraints
- **Cultural preservation:** Funding for language, art, heritage
- **Humanitarian action:** Direct support for those in need
- **Secure communications:** Cryptographic protocols that cannot be surveilled
- **Truth documentation:** Journalism, human rights records, historical archives

The following section specifies a communications protocol that ensures activists, journalists, and ordinary citizens can coordinate without fear of interception.

15 CYRUS Protocol: Post-Quantum Secure Communications

*“Raise your words, not your voice.
It is rain that grows flowers, not thunder.”*

— Rumi

Liberation requires coordination. Coordination requires communication. And communication under surveillance is not communication—it is entrapment.

The CYRUS community recommends and supports the development of post-quantum secure messaging protocols that protect activists, journalists, and citizens from both current surveillance and future quantum attacks. This section specifies the technical requirements and architecture.

15.1 Threat Model

We assume adversaries with:

- **Mass surveillance capability:** Ability to intercept and store all network traffic
- **State-level resources:** Access to nation-state cryptanalytic capabilities
- **Future quantum computers:** Ability to break classical asymmetric cryptography (RSA, ECDH) within 10–20 years
- **Endpoint compromise attempts:** Malware, physical seizure, coercion
- **Network-level attacks:** Traffic analysis, timing attacks, node compromise

15.2 Security Goals

The protocol must achieve:

Property	Description
Confidentiality	Only intended recipients can read messages
Authenticity	Recipients can verify sender identity
Forward Secrecy	Past messages safe even if keys later compromised
Post-Compromise Security	Recovery after temporary key compromise
Metadata Protection	Sender/recipient relationship hidden from observers
Post-Quantum Resistance	Secure against quantum cryptanalysis
Offline Capability	Messages deliverable when recipient offline
Multi-Device Support	Seamless use across multiple devices
Decentralization	No single point of failure or control

Table 11: CYRUS Protocol Security Requirements

15.3 Cryptographic Primitives

15.3.1 Hybrid Post-Quantum Key Exchange

Classical elliptic curve cryptography (X25519) is efficient but vulnerable to Shor’s algorithm on quantum computers. Post-quantum lattice-based schemes (ML-KEM/CRYSTALS-Kyber) resist quantum attacks but are newer and less battle-tested.

Solution: Hybrid key exchange combining both:

$$K_{\text{shared}} = \text{KDF}(K_{X25519} \| K_{\text{ML-KEM}}) \quad (7)$$

Security holds unless *both* schemes are broken—classical cryptanalysis defeats ML-KEM *and* quantum computers defeat X25519 simultaneously.

Primitive	Algorithm	Purpose
Classical KEM	X25519	ECDH key agreement
Post-Quantum KEM	ML-KEM-768 (Kyber)	Quantum-resistant key encapsulation
Symmetric Encryption	ChaCha20-Poly1305	AEAD for message encryption
Key Derivation	HKDF-SHA256	Derive session keys from shared secrets
Signatures	Ed25519 + Dilithium	Authentication (hybrid PQ)
Hash Function	SHA-256/SHA-3	Integrity, ratchet advancement

Table 12: Cryptographic Primitives

15.3.2 Double Ratchet with PQ Enhancement

The Double Ratchet algorithm (Signal Protocol) provides forward secrecy and post-compromise security. We enhance it with post-quantum key encapsulation:

1. **Root Key Ratchet:** Updated with each new DH/KEM exchange
2. **Sending/Receiving Chains:** Derived from root key, advanced per-message
3. **Message Keys:** Ephemeral, deleted immediately after use
4. **PQ Ratchet:** Periodic ML-KEM re-keying for quantum resistance

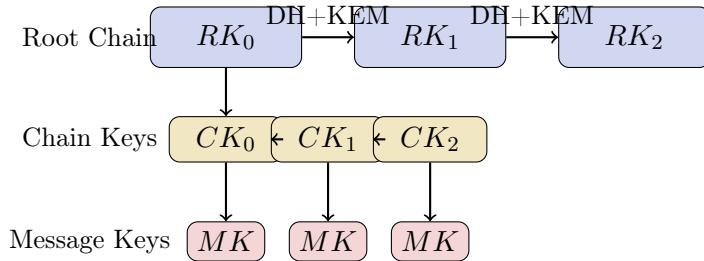

Figure 4: Post-Quantum Enhanced Double Ratchet

15.4 Anonymous Transport: Onion Routing

Messages are wrapped in multiple encryption layers and routed through a network of nodes, so no single node knows both sender and recipient.

15.4.1 Three-Hop Onion Requests

1. **Entry Node:** Knows sender IP, but not destination or content
2. **Middle Node:** Knows only previous and next hop
3. **Exit Node:** Knows destination swarm, but not sender

Each hop strips one encryption layer:

$$\text{Onion} = E_{K_1}(\text{addr}_2 \| E_{K_2}(\text{addr}_3 \| E_{K_3}(\text{swarm} \| E_{\text{recipient}}(\text{message})))) \quad (8)$$

15.4.2 Decentralized Message Storage (Swarm)

Messages are stored in recipient's "swarm"—a set of nodes determined by a DHT (Distributed Hash Table) based on recipient's public key. This enables:

- **Offline delivery:** Messages persist until recipient retrieves them
- **Redundancy:** Multiple nodes store each message
- **Censorship resistance:** No single node can block delivery
- **Expiration:** Messages auto-delete after configurable period

15.5 Multi-Device Architecture

Users need messaging across phone, laptop, tablet. The protocol supports this via:

- **Per-Account Keys:** Master identity key pair (long-term)
- **Per-Device Keys:** Each device has unique keys linked to account
- **Config Messages:** Encrypted sync of device list, settings, contacts
- **Explicit Device Management:** Users can add/remove devices, revoke compromised ones

15.6 Implementation Recommendations

The CYRUS community endorses and recommends:

- **Session Messenger:** Open-source, implements this architecture, actively developing Protocol V2 with PQ support
- **Signal Protocol:** Excellent ratchet design, adding PQ (PQXDH)
- **Matrix/Element:** Decentralized, end-to-end encrypted, federation model

For activists inside Iran: Use Session or Signal over Tor/VPN. Assume all unencrypted communications are monitored. Delete messages after reading. Use disappearing messages. Never discuss operational details over any electronic medium unless absolutely necessary.

15.7 The Mathematics of Freedom

Cryptography is mathematics in service of liberty. The security of these protocols rests on problems believed to be computationally hard:

- **Discrete Logarithm Problem:** Given $g^x \bmod p$, find x (classical security)
- **Elliptic Curve DLP:** Given $[k]P$ on curve E , find k (compact classical security)
- **Learning With Errors (LWE):** Given $(\mathbf{A}, \mathbf{As} + \mathbf{e})$, find \mathbf{s} (post-quantum security)
- **Module-LWE:** Structured variant enabling efficient ML-KEM

These mathematical structures—groups, rings, lattices—are the foundation of secure communication. Every time an activist sends an encrypted message, they are protected by millennia of mathematical discovery, from Euclid to Diffie-Hellman to the lattice cryptographers of today.

This is why we call on mathematicians to join our cause. Your work is not abstract—it is the armor of the oppressed.

16 A Call to Artists, Mathematicians, and Cryptographers

*“Sell your cleverness and buy bewilderment.
 Cleverness is mere opinion, bewilderment is intuition.”*
 — Rumi

The liberation of Iran—and the broader struggle for human freedom—requires more than activists and organizers. It requires *builders*: those who create the tools, tell the stories, and prove the theorems that make freedom possible.

16.1 To the Artists

Persian civilization has always been a civilization of artists. The miniaturists of Isfahan, the poets of Shiraz, the musicians of the classical radif, the filmmakers of the Iranian New Wave—art is how we remember who we are.

We need you now.

- **Visual artists:** Create the imagery of freedom—posters, murals, digital art that inspires and unifies
- **Musicians:** Compose the anthems of liberation—songs that will be sung in the streets of Tehran
- **Writers:** Tell our stories—novels, poems, screenplays that capture the Persian spirit
- **Filmmakers:** Document the struggle—films that bear witness and move hearts
- **Designers:** Build the visual identity of a free Iran—logos, flags, symbols that unite

Art is not decoration. Art is *infrastructure*. A movement without art is a movement without soul.

16.2 To the Mathematicians

Persian mathematics changed the world. Al-Khwarizmi gave us algebra. Omar Khayyam solved cubic equations. Nasir al-Din Tusi advanced trigonometry. This tradition of rigorous, beautiful mathematics is our heritage.

We need your minds.

- **Cryptographers:** Design and analyze the protocols that protect activists
- **Game theorists:** Model the dynamics of regime collapse and peaceful transition
- **Mechanism designers:** Create voting systems, allocation mechanisms, governance structures that are manipulation-resistant
- **Statisticians:** Analyze human rights data, detect fraud, quantify suffering
- **Complexity theorists:** Prove the hardness assumptions that secure our communications

Every theorem you prove, every protocol you design, every attack you discover and fix—these are acts of liberation.

16.3 To the Cryptographers

You hold the keys to the kingdom—literally. The protocols you design determine whether activists can coordinate safely, whether journalists can protect sources, whether families can communicate without fear.

We need your expertise.

- **Protocol designers:** Help us build and audit secure communication systems
- **Implementation experts:** Write secure code that withstands real-world attacks
- **Cryptanalysts:** Find vulnerabilities before adversaries do
- **Applied researchers:** Bridge the gap between academic advances and deployed systems
- **Educators:** Teach operational security to activists, journalists, citizens

The work you do in your lab, your office, your late-night coding sessions—this work protects lives. This work enables freedom.

16.4 To the Engineers and Builders

Software engineers, hardware designers, network architects, systems administrators—you build the infrastructure of the digital world.

Build it for freedom.

- **Contribute to open source:** Session, Signal, Tor, Matrix—these projects need developers
- **Build censorship-circumvention tools:** VPNs, proxies, mesh networks that work inside Iran
- **Design resilient systems:** Decentralized, fault-tolerant, surveillance-resistant
- **Audit and harden:** Find and fix vulnerabilities in freedom tools
- **Document and educate:** Write guides that help non-technical users protect themselves

16.5 The CYRUS Grants for Builders

The CYRUS DAO will establish grant programs specifically for artists, mathematicians, and engineers working on freedom tools:

Grant Category	Focus	Examples
Art for Freedom	Visual, musical, literary works	Albums, films, murals
Cryptographic Research	Protocol design, analysis	New schemes, audits
Tool Development	Software for activists	Apps, libraries, guides
Education	Training materials	Courses, workshops, docs
Documentation	Human rights records	Archives, databases

Table 13: CYRUS Builder Grants

17 News, Updates, and the Living Document

*“Yesterday I was clever, so I wanted to change the world.
Today I am wise, so I am changing myself.”*

— Rumi

A liberation movement must be adaptive. Conditions change. New challenges emerge. Opportunities arise. The CYRUS ecosystem includes infrastructure for ongoing communication and coordination.

17.1 Official Channels

Channel	Purpose	Update Frequency
cyrus.cash	Official website, whitepaper	As needed
Twitter/X (@cyrus_cash)	News, announcements	Daily
Telegram (CyrusCommunity)	Community discussion	Real-time
Discord	Technical discussion, governance	Real-time
GitHub (cyrusdao)	Code, proposals, documentation	Continuous
On-chain (Base)	Treasury, governance votes	Per transaction

Table 14: Official Communication Channels

17.2 Governance Proposals as News

Every DAO proposal is a form of news—a signal of community priorities, a record of decisions, a log of action. The on-chain governance system creates an immutable, transparent record of:

- Grant recipients and amounts
- Treasury allocations
- Constitutional amendments
- Community resolutions

17.3 The Whitepaper as Living Document

This whitepaper is versioned and will be updated as the project evolves. Significant changes require DAO governance approval. The GitHub repository maintains full history:

<https://github.com/cyrusdao/whitepaper>

Current Version: 1.4.0

Last Updated: January 11, 2026

18 Technical Appendix

18.1 Smart Contract Specifications

Parameter	Value
Token Name	Cyrus
Token Symbol	CYRUS
Token Standard	ERC-20
Decimals	18
Total Supply	1,000,000,000 (1 Billion)
Blockchain	Base (Coinbase L2)
Chain ID	8453
Payment Token	USDbC (USDT equivalent on Base)
USDbC Address	0xd9aAEc86B65D86f6A7B5B1b0c42FFA531710b6CA

Table 15: Smart Contract Technical Details

18.2 Contract Features

The CYRUS smart contract implements the following security and functionality features:

- **ERC-20 Standard:** Full compatibility with all ERC-20 wallets and exchanges
- **ERC-20 Permit:** Gasless approvals via EIP-2612 signatures
- **ERC-20 Burnable:** Tokens can be burned to reduce supply
- **ERC-20 Pausable:** Emergency pause capability for security
- **Ownable:** Administrative functions protected by ownership
- **ReentrancyGuard:** Protection against reentrancy attacks
- **SafeERC20:** Safe token transfer handling
- **Superchain Bridge:** Compatible with Base/Optimism Superchain bridge

18.3 Transfer Lock Mechanism

To prevent speculation during the Genesis phase, transfers are locked until Nowruz 2026:

Parameter	Value
Unlock Event	Nowruz 2026 (Spring Equinox)
Unlock Date	March 21, 2026 12:00:00 UTC
Unix Timestamp	1742558400

Table 16: Transfer Lock Parameters

During Genesis Phase (Before Nowruz 2026):

- Minting (buying from bonding curve) — **Allowed**
- Burning — **Allowed**

- LP wallet transfers (for DEX setup) — **Allowed**
- All other transfers — **Blocked**

After Nowruz 2026:

- All transfers — **Allowed**

18.4 Bonding Curve Mathematics

The quadratic bonding curve is implemented with the following formula:

$$P(s) = P_{start} + (P_{end} - P_{start}) \times \left(\frac{s}{S_{total}} \right)^2 \quad (9)$$

Where:

- $P(s)$ = Price when s tokens have been sold
- P_{start} = \$0.01 (10,000 in USDT 6-decimal format)
- P_{end} = \$1.00 (1,000,000 in USDT 6-decimal format)
- s = Tokens sold so far
- S_{total} = 900,000,000 tokens (SALE_SUPPLY)

Contract Constants:

```
START_PRICE    = 10000      // $0.01 in USDT (6 decimals)
END_PRICE     = 1000000    // $1.00 in USDT (6 decimals)
SALE_SUPPLY   = 900,000,000 * 10^18 // 900M tokens
LP_RESERVE    = 100,000,000 * 10^18 // 100M tokens
MAX_SUPPLY    = 1,000,000,000 * 10^18 // 1B tokens
```

18.5 Security Considerations

- **Checks-Effects-Interactions:** State updates occur before external calls
- **Slippage Protection:** Optional `minTokensOut` parameter on buys
- **No Sell Function:** Tokens can only be bought during bonding curve phase
- **Immutable USDT Address:** Payment token address cannot be changed
- **Multi-step Price Calculation:** Accurate integration over quadratic curve

18.6 Contract Functions

Public View Functions:

- `getCurrentPrice()` — Returns current price in USDT (6 decimals)
- `calculateTokensForUsdt(amount)` — Calculate tokens for USDT amount
- `tokensSold()` — Total tokens sold through bonding curve
- `usdtRaised()` — Total USDT raised
- `saleActive()` — Whether bonding curve sale is active

- `transfersEnabled()` — Whether transfers are unlocked
- `NOWRUZ_2026()` — Transfer unlock timestamp

Public Write Functions:

- `buy(usdtAmount)` — Buy tokens with USDT
- `buy(usdtAmount, minTokensOut)` — Buy with slippage protection

Owner Functions:

- `fundLP()` — Transfer raised USDT to LP wallet
- `setLPWallet(address)` — Update LP wallet address
- `endSale()` — End bonding curve sale early
- `resumeSale()` — Resume paused sale
- `pause() / unpause()` — Emergency pause controls

18.7 Verified Contract Addresses

Base Mainnet (Chain ID: 8453)

CYRUS Token: [To be published upon deployment]

USDbC (Payment): 0xd9aAEc86B65D86f6A7B5B1b0c42FFA531710b6CA

Contract source code will be verified on BaseScan upon deployment.

Audit report will be published before launch.
